Professional Profile

A passion for data led me to this path of becoming a Data Analyst. I am now seeking my first opportunity where I will bring the skillset I acquired through years of working in customer-facing environments.

Furthermore, I possess strong leadership, communication and problem-solving skills gained through management experience in a professional setting. I have been able to gain advanced SQL and Excel skills and practical experience using Power BI and Python through self-directed projects.

Featured Data Analytics Project

Global Happiness, Inflation & Unemployment Analysis (2015–2023)

- Analysed 58,000+ records from public datasets.
- Used SQL joins and aggregations to clean and prepare data.
- Performed correlation analysis in Python (Pandas).
- Built an interactive Power BI dashboard with KPI cards, line charts, scatter plots and slicers.
- Found weak negative correlations (-0.20) between inflation, unemployment and happiness.

Technical Skills

SQL (Joins, Aggregations, Data Cleaning)

Power BI

Python (Pandas)

Microsoft Excel

Data Visualisation

Dashboard Development

Correlation Analysis

Professional Experience

Shift Manager – Burger King (Moto Hospitality) | Mar 2023 – Present

- Lead and coordinate teams in a fast-paced environment.

- Monitor operational performance including service speed and quality.
